Concept

**FACILITER
L'ÉNERGIE,
FACILITER
LA VIE**

Strategic ambitions

Energy Communities

Interests for ORES

- Facilitating new customer expectations
- Facilitating renewable energy development
- Optimise energy flows locally
- Encourage use of the public network

Energy Communities

Regulatory framework

- Extract of the latest walloon regional political declaration
 - *En s'appuyant sur l'expertise du régulateur, le décret et les arrêtés seront modifiés en vue d'établir un cadre de développement approprié des réseaux alternatifs et micro-réseaux, y compris citoyens, sous leurs différentes formes. L'émergence de ces réseaux se réalisera en étant attentif à une contribution équitable de l'ensemble des utilisateurs du réseau public.*
- Walloon decree project to foster the development of renewable energy communities currently in parliament
- European Directive on the promotion of the use of energy from renewable sources (12/2018)

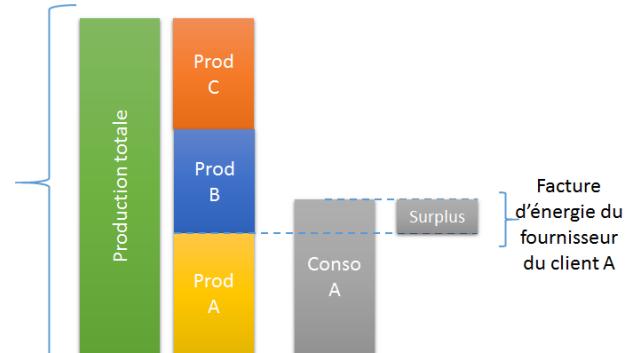

Pilot project E-cloud

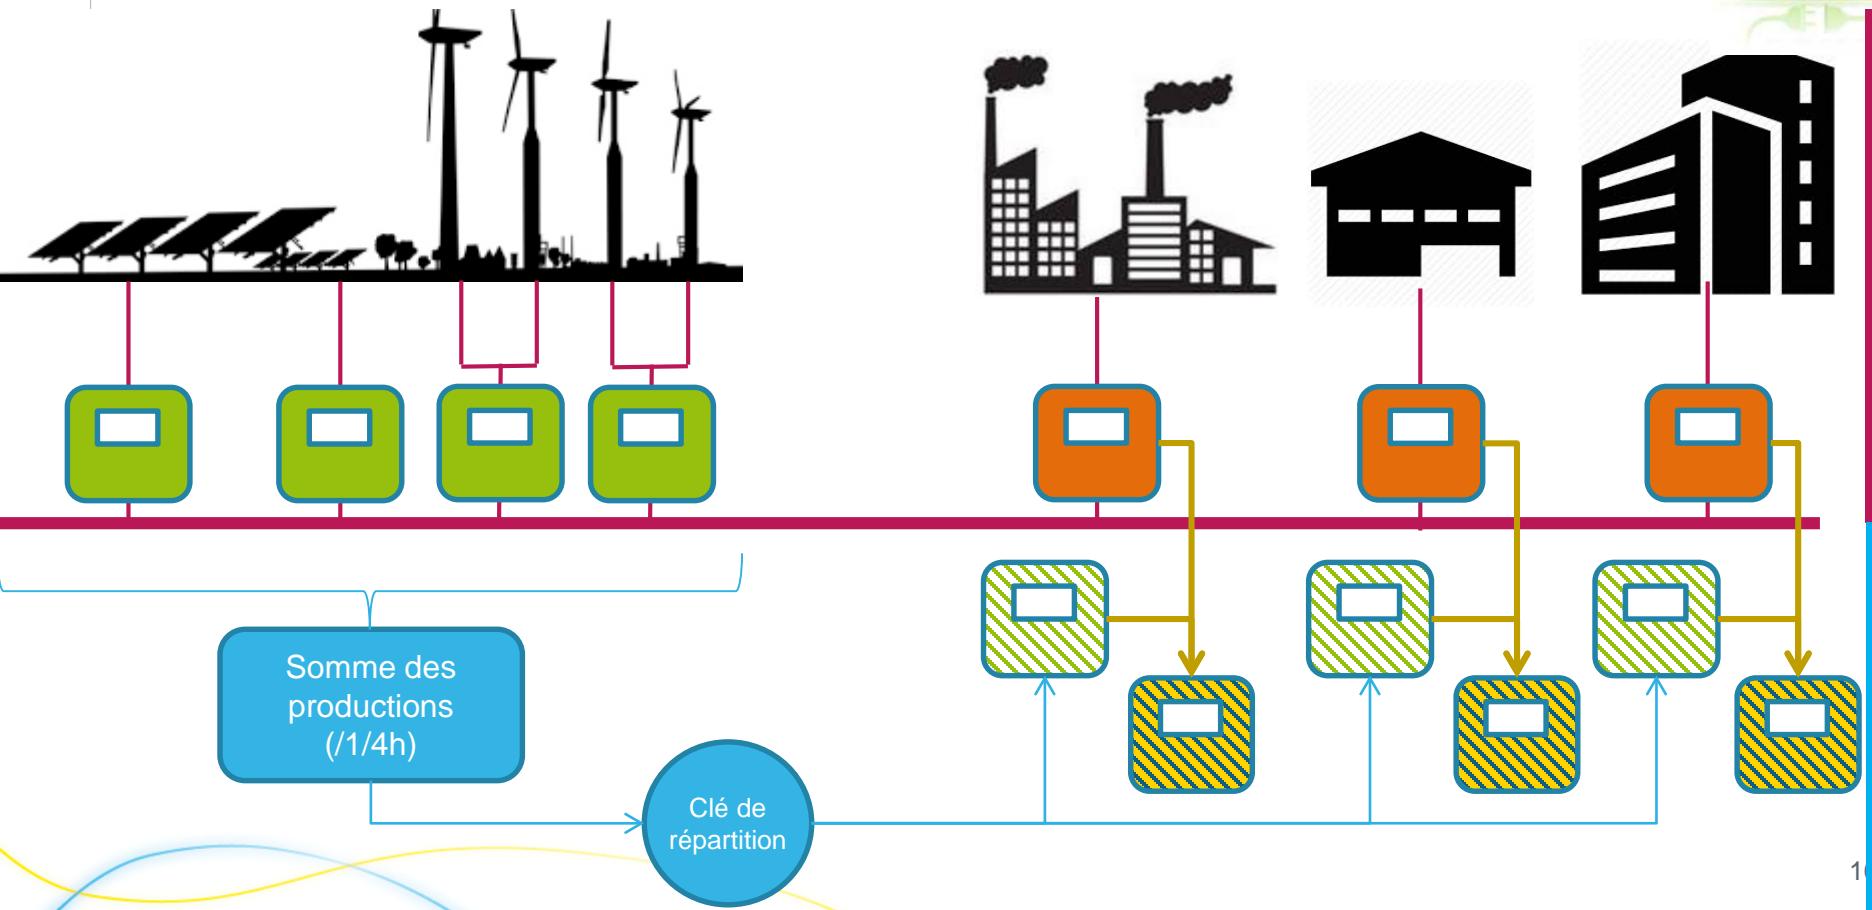

Central ideas

- Production units are made available by an energy producer to an medium voltage energy community inside an industrial activity park
- Local production consumed locally is considered to be self-consumption
 - ↳ Clients pay this production directly
- Energy not produced locally enters in the classical market processse
 - ↳ Clients keep their liberty to negotiate this part

Information exchange model and physical link with the cloud

New services

- Sizing of the optimal energy production mix based on the consumption profile of the participating clients
- Direct purchase of locally produced energy
- New services offered by the DSO
 - ↳ Specific treatment of metering data
 - ↳ Divide the produced energy amongst the consumers according to a specific key
 - ↳ Market faced meter = Head meter – Virtual green meter
 - ↳ Forecast of the individual consumption and local production to increase self-consumption and create a web portal

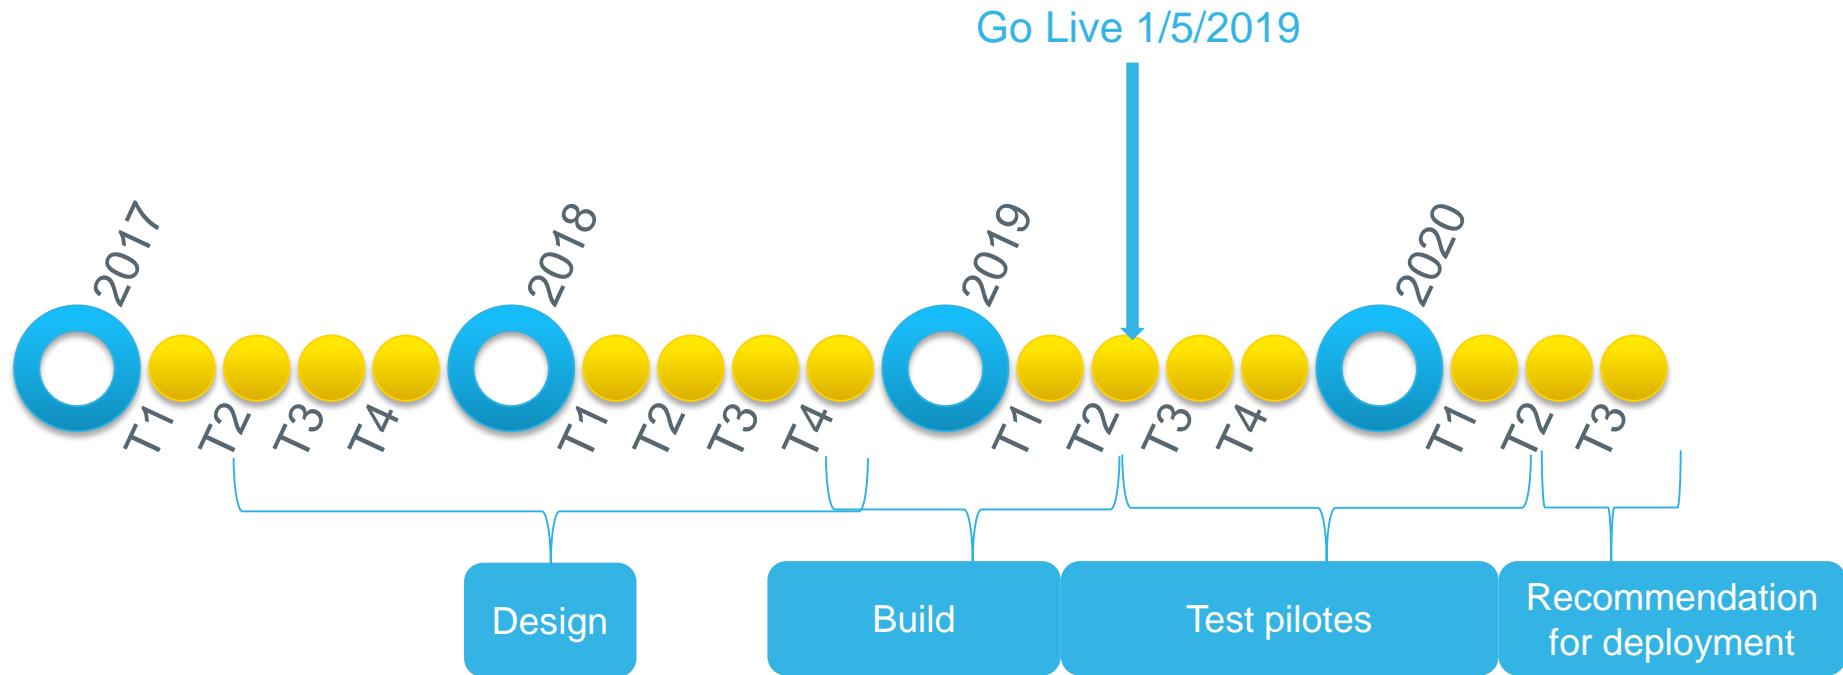

Consortium

Two pilot projects: Sart Tilman & Tournai Ouest

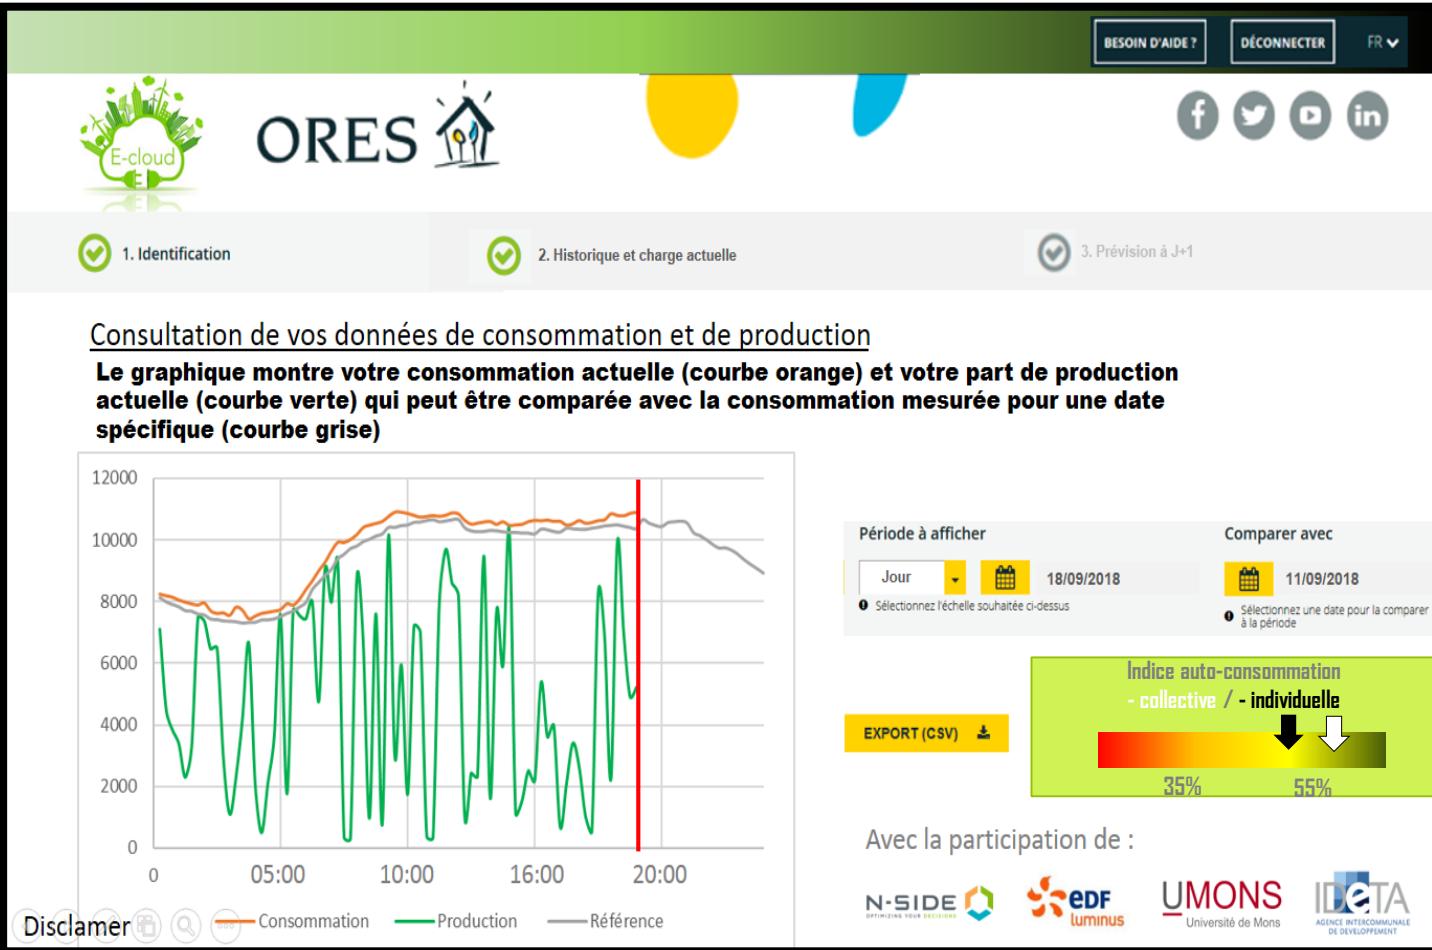

Planning

Current status

- For the ORES pilot project at Tournai Ouest: authorization of the CWAPE received on 21/3/19
 - ▶ Derogation from market rules: metering data from a calculated meter
 - ▶ Derogation from the obligation to buy green energy certificates for energy supply for self-consumption
 - ▶ Agreement between all participating parties in the E-cloud pilot
 - ▶ Power purchase agreement
 - ▶ Specific network tarif incentivizing collective self-consumption
- Recruiting of the clients ongoing
- Finalizing development of the web portal and the meter calculation tool

Conclusions

Conclusions

- Anticipate of a new market model with a clear definition of roles and responsibilities
- Analyze the impact of a large scale development of energy communities on all consumers
- Extension of the E-cloud project → Zelda project

Faciliter l'énergie, faciliter la vie
